

photopolymer science and applications pdf

To ensure that the photopolymers are printable with high resolution in the vertical dimension and high dimensional accuracy in the planar dimension, the curing depth and excess width of the photopolymers were investigated.

4D printing of high performance shape memory polymer using

In FDM method, a continuous filament of a thermoplastic polymer is used to 3D print layers of materials (Fig. 1a). The filament is heated at the nozzle to reach a semi-liquid state and then extruded on the platform or on top of previously printed layers.

Additive manufacturing (3D printing): A review of

Stereolithography (SLA or SL; also known as stereolithography apparatus, optical fabrication, photo-solidification, or resin printing) is a form of 3D printing technology used for creating models, prototypes, patterns, and production parts in a layer by layer fashion using photopolymerization, a process by which light causes chains of molecules ...

Scanning wave photopolymerization enables dye-free

3D printing is any of various processes in which material is joined or solidified under computer control to create a three-dimensional object, with material being added together (such as liquid molecules or powder grains being fused together), typically layer by layer.
